

Spare Parts Packages

MTS SilentFlo™ Hydraulic Power Units

Spare Parts Packages

Available for all sizes and models of:

- » SilentFlo 505G2
- » SilentFlo 515

Hydraulic Power Units (HPUs) generate the power needed to run the test systems in your lab. If an HPU is down, lab productivity slows or stops. To avoid unplanned downtime and make sure your hydraulic power system and test equipment are performing optimally, MTS offers Spare Parts Packages for our MTS SilentFlo™ Hydraulic Power Units.

Depending upon your uptime requirements, we can recommend a spare parts solution that is appropriate for your testing environment. We offer spares kits that are specific to each model, and packages to support mission-critical sub-systems such as the programmable logic controls, heat exchangers and pump/motor modules.

We have further classified these spare parts as critical, important or necessary for system maintenance. Parts that are considered to be critical include items that could result in extended downtime or have a long lead time. Parts classified as important include items that could impact uptime or performance. Maintenance parts are items required for routine maintenance of the HPU. Knowing the criticality of each part will help you choose the optimum spares strategy.

Downtime costs time and money, but a proactive approach to maintenance and repair complete with a spares strategy for your HPU will help mitigate the risk of downtime and ensure that there is a plan in place to resolve unexpected issues in a timely manner.
