(Name and telephone number, including area code, of the person to contact in connection with this report)

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

- Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2017.

Explanatory Note

On May 22, 2018, MTS Systems Corporation (the “Company”) filed its Form SD (the “Original Form SD”) for the reporting period from January 1, 2017 to December 31, 2017. The Company is filing this Amendment No. 1 on Form SD/A (“Amendment No. 1”) solely to include a date on the signature page which was inadvertently omitted from the Original Form SD. Other than with respect to this addition, this Amendment No. 1 does not contain any modifications, updates or other changes to the disclosures contained in the Original Form SD.

Section 1 - Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Introduction

This Specialized Disclosure Form (“Form SD”) of MTS Systems Corporation (the “Company” or “MTS”) has been prepared pursuant to Rule 13p-1 and Form SD promulgated under the Securities Exchange Act of 1934, as amended (the “Rule”) for the reporting period from January 1, 2017 to December 31, 2017.

The Rule requires disclosure of certain information when a company manufactures or contracts to manufacture products and the minerals specified in the Rule are necessary to the functionality or production of those products. The specified minerals, which MTS collectively refers to in this Form SD as the “Subject Materials,” are gold, columbite-tantalite (coltan), cassiterite and wolframite, including their derivatives, which are limited to tantalum, tin and tungsten. The “Covered Countries” for the purposes of the Rule and this Form SD are the Democratic Republic of Congo, the Republic of the Congo, the Central African Republic, South Sudan, Uganda, Rwanda, Burundi, Tanzania, Zambia and Angola. The Company manufactures products for which the Subject Materials are necessary to the functionality or production of those products.

Company Overview

MTS Systems Corporation’s testing hardware, software and services solutions help customers accelerate and improve their design, development and manufacturing processes and are used for determining the mechanical behavior of materials, products and structures. MTS’s high-performance sensors provide controls for a variety of applications measuring motion, pressure, position, force and sound.

Products Overview

This Form SD and the Conflict Minerals Report for the reporting period from January 1, 2017 to December 31, 2017 (the “Report”) filed as an exhibit to this Form SD relates to products: (i) for which Subject Materials are necessary to the functionality or production of that product; (ii) that were manufactured by the Company; and (iii) for which the manufacture was completed during calendar year 2017. These products, which are referred to in this Form SD and the Report collectively as the “Covered Products,” are the following: test equipment and systems for the ground vehicle, material, and structure markets in addition to high-performance sensors for a variety of industrial, monitoring and measuring, aerospace, military, cryogenic, mobile hydraulic, and liquid level applications.

Reasonable Country of Origin Inquiry

The Company has conducted a good faith reasonable country of origin inquiry (“RCOI”) for the Subject Materials contained in the Covered Products. This good faith RCOI was reasonably designed to determine whether any of the Subject Materials contained in the Covered Products originated in the Covered Countries and whether any of those Subject Materials may be from recycled or scrap sources. As discussed in more detail in the Report, based on these responses, and in light of the complexity of its supply chain, the Company was unable to fully determine at this time that its necessary Subject Materials did not originate in the Covered Countries or are not from recycled or scrap sources. Accordingly, the Company has conducted due diligence on the source and chain of custody of the necessary Subject Materials contained in its products as described in the Report.

A copy of the Report is attached as Exhibit 1.01 to this Form SD and is publicly available at the following website: <http://www.mts.com/en/about/Ethics/index.htm> .

Item 1.02 Exhibit

A copy of the Report is attached as Exhibit 1.01 to this Form SD.

Section 2 - Exhibits

Item 2.01 Exhibits

The following exhibit is attached to this Form SD:

Exhibit 1.01 - [Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form SD.](#)

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

Date: May 24, 2018

MTS SYSTEMS CORPORATION

MTS Systems Corporation

Conflict Minerals Report

Introduction

This Conflict Minerals Report (the “Report”) of MTS Systems Corporation (the “Company” or “MTS”) has been prepared pursuant to Rule 13p-1 and Form SD promulgated under the Securities Exchange Act of 1934, as amended (the “Rule”) for the reporting period from January 1, 2017 to December 31, 2017.

The Rule requires disclosure of certain information when a company manufactures or contracts to manufacture products and the minerals specified in the Rule are necessary to the functionality or production of those products. The specified minerals, which the Company collectively refers to in this Report as the “Subject Materials,” are gold, columbite-tantalite (coltan), cassiterite and wolframite, including their derivatives, which are limited to tantalum, tin and tungsten. The “Covered Countries” for the purposes of the Rule and this Report are the Democratic Republic of Congo, the Republic of the Congo, the Central African Republic, South Sudan, Uganda, Rwanda, Burundi, Tanzania, Zambia and Angola. As described in this Report, the Company manufactures products for which the Subject Materials are necessary to the functionality or production of those products.

Company Overview

MTS Systems Corporation’s testing hardware, software and services solutions help customers accelerate and improve their design, development and manufacturing processes and are used for determining the mechanical behavior of materials, products and structures. MTS’s high-performance sensors provide controls for a variety of applications measuring motion, pressure, position, force and sound.

Products Overview

This Report relates to products: (i) for which Subject Materials are necessary to the functionality or production of that product; (ii) that were manufactured by the Company; and (iii) for which the manufacture was completed during calendar year 2017. These products, which are referred to in this Report collectively as the “Covered Products,” are the following: test equipment and systems for the ground vehicle, material, and structure markets in addition to high-performance sensors for a variety of industrial, monitoring and measuring, aerospace, military, cryogenic, mobile hydraulic, and liquid level applications.

Due Diligence Design and Framework

Based on the results of the good faith reasonable country of origin inquiry (“RCOI”) described in the Form SD to which this Report is filed as an exhibit, the Company has exercised due diligence on the source and chain of custody of the Subject Materials contained in its Covered Products. The Company has designed its due diligence measures to conform, in all material respects, with the internationally recognized due diligence framework as set forth in the Organization for Economic Cooperation and Development (“OECD”) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (OECD, 2013) (“OECD Framework”) and related supplements for gold and for tin, tantalum and tungsten.

Establish company management systems:

- MTS has a “Conflict Minerals Sourcing Policy” (the “Company Policy”) that is published on MTS’s website at: <http://www.mts.com/en/about/Ethics/index.htm>
- MTS engaged with applicable suppliers that it believed were most likely to supply products containing the Subject Materials. The Company identified its applicable suppliers using the North American Industry Classification System codes, which are standardized codes for groups of vendors with similar economic activity or production. Suppliers based in China were engaged prior to the survey to determine whether the material supplied to the Company included the Subject Materials and only suppliers that responded in the affirmative were included in the survey. Once all in-scope suppliers were aggregated, another filter was applied using dollars spent. Suppliers that represented 95% of the entire related dollars spent for Subject Materials were selected for survey. For the Sensors segment, only suppliers who have consistently responded yes to the presence of Subject Materials in the material supplied to MTS were included in the survey.
- The Company’s due diligence measures focus on working with its suppliers based upon a framework established by the Electronic Industry Citizenship Coalition and Global e-Sustainability (“EICC/GeSI”) initiative to identify the location of smelters and refiners of Subject Materials who provide those Subject Materials to its suppliers. The Company conducted supply chain surveys based on the EICC/GeSI conflict minerals questionnaire with all applicable suppliers identified during its applicability assessment explained above.

Identify and assess risks in the supply chain:

- Suppliers surveyed were asked to identify smelters and refiners (“SORs”) that process Subject Materials contained in the Company’s products, including country of origin of any Subject Materials, based on the EICC/GeSI conflict minerals questionnaire.
- A third party vendor logged every survey into their technology platform and reviewed every survey.
- Non-responsive suppliers and survey responses that were incomplete or inconsistent were identified for additional follow-up.
- Reasons for follow-up with suppliers included, but were not limited to, that the supplier did not provide a complete or accurate smelter list or did not receive complete conflicts mineral sourcing information from all of their relevant suppliers. Suppliers who did not provide the country of origin information in their survey responses were also sent a follow-up communication requesting that they provide additional sourcing information.
- Smelters identified by the Company’s suppliers were compared against the lists maintained by the Responsible Mineral Initiative (“RMI”) and the smelter list prepared by the Company’s third party vendor.

Design and implement a strategy to respond to identified risks:

- Suppliers that responded with smelters not listed as conformant or active on the lists prepared by RMI were re-engaged to validate sourcing from these smelters for products supplied to MTS.
- The Company conducted research in the public domain in order to identify sourcing information for smelters that are not on the RMI compliant smelter list, when possible.

- The Company notified suppliers via email and telephone whose sourcing practices do not conform to the Company policy, which could result in removal of those suppliers from the supply chain if these remediation efforts are not successful.
- Business Unit representatives also notified suppliers via email and telephone to ensure that applicable suppliers updated their responses with accurate and complete information.

Carry out independent third-party audit of smelter/refiner due diligence practices:

- MTS is a downstream consumer of Subject Materials and is many steps removed from smelters and refiners who source raw minerals and ores. MTS does not purchase raw minerals or ores, and does not, to the best of its knowledge, directly purchase Subject Materials from any of the Covered Countries.

Report annually on supply chain due diligence:

- This Report and the associated Form SD are available online at the following website:
<http://www.mts.com/en/about/Ethics/index.htm>

Due diligence measures undertaken

In accordance with the OECD Framework, MTS took the following measures for this reporting year to exercise due diligence on the source and chain of custody of Subject Materials:

- On behalf of MTS, a third party provider engaged all applicable suppliers and reviewed every response to determine completeness, accuracy, and consistency.
- Suppliers that did not send a complete or accurate response were re-engaged to update responses.
- MTS utilized the RMI smelter database and other proprietary resources to determine the sourcing locations for the SORs identified in MTS's supply chain.
- Suppliers were notified by e-mail of the status of their responses to the surveys and if their response is rejected, or if incomplete or inconsistent, suppliers were asked to correct and resubmit.
- MTS aggregated all smelter data and developed a list of all SORs information received from MTS supply chain.
- MTS re-engaged suppliers to change sourcing from SORs that are known to source from Covered Countries or were not validated by RMI audit to be conflict free.

Results

Based on the RCOI and after exercising the Company's due diligence described above, MTS knows or has reason to believe that a portion of its necessary Subject Materials originated or may have originated in the Covered Countries and knows or has reason to believe that those necessary Subject Materials may not be solely from recycled or scrap sources, both because MTS identified that some Subject Materials may have originated in a Covered Country and because MTS has insufficient country of origin information from suppliers or other sources regarding all of the smelters that processed the Subject Minerals.

MTS received representations from 84% of its in-scope suppliers. Of all the smelter information received from its suppliers, approximately 82% have been designated as conflict free or actively pursuing such designation under the RMI (list of these smelters is provided in Annex 1). The remaining smelters that were identified as potentially sourcing 3TG are not currently RMI compliant or actively pursuing such designation. The source of Subject Materials from these smelters is undetermined at this time. The Company has taken and will continue to take actions to mitigate risk regarding Subject Materials used in its products.

Independent audit

An independent private sector audit of this Report is not required.

Continuous improvement efforts to mitigate risk

The Company has taken and intends to take the following steps to improve the number and quality of supplier responses in the next compliance period and to mitigate risk that the conflict minerals used in its products may finance or benefit armed groups in the Covered Countries:

- Continue to use contract terms and conditions for new contracts requiring suppliers to respond to inquiries regarding conflict minerals in a timely manner.
- Continue to work with suppliers to identify to the extent possible the source of Subject Materials used in MTS's products.
- Encourage suppliers to source from smelters that have received the conflict free designation or that are otherwise subject to adequate due diligence to ensure such minerals are not being used to fund conflict.

Certain statements in this Report may be "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. These forward-looking statements include expectations concerning the Company's future actions to engage suppliers, to identify to the extent possible the source of Subject Materials in its products and to take other actions regarding its product sourcing. The Company's actual actions or results may differ materially from those expected or anticipated in the forward-looking statements due to both known and unknown risks and uncertainties including, but not limited to, decisions to make changes in the Company's continual improvement efforts and delays or difficulties in engaging suppliers and identifying the source of Subject Materials contained in the Company's products.
