

# **Series 651 Environmental Chambers**

A comprehensive solution for accurate and stable temperature control

**MTS SERIES 651 ENVIRONMENTAL CHAMBERS** ENABLE THE TESTING OF MATERIALS AND COMPONENTS WITHIN A WIDE RANGE OF TEMPERATURES. THESE VERSATILE, RELIABLE CHAMBERS ARE SPECIFICALLY DESIGNED TO WORK WITH A VARIETY OF MTS LOAD FRAMES.

![](_page_1_Picture_1.jpeg)

MTS Series 651 Environmental Chambers enable test teams and researchers to perform a wide array of mechanical tests in conditions that closely replicate the temperatures that materials and components experience in their actual operating environments, providing confidence in the operating range of a material in the real-world.

To ensure accurate and consistent results, MTS chambers are designed to maintain a constant temperature within a few degrees of the desired setting and with very little temperature gradient across the specimen. Heating is achieved with electrical heating elements and a motor-driven fan for diffused convection heat. Cooling is accomplished with liquid nitrogen. All chambers feature a built-in temperature controller and all-welded construction with Fiberglas<sup>™</sup> insulation.

These chambers are engineered to integrate seamlessly with a wide variety of floor-standing and tabletop load frames from MTS, including the MTS Acumen<sup>™</sup> Electrodynamic Test System and MTS Landmark<sup>®</sup> Servohydraulic Test Systems, and MTS controllers, grips and fixtures.

#### Performance

With a temperature range of at least 440°C (800°F), chambers in the 651 series can test as low as -150°C (-238°F) or as high as 540°C (1000°F). Forced convection heating ensures rapid heat transfer and overshoot protection, while liquid nitrogen provides efficient cooling.

651.05F-01 chamber

for use on Acumen

# Control

These chambers have precise temperature management and optional remote set-point control to regulate temperature from the system PC. The fan, its blades and a baffle help ensure uniform temperatures throughout the chamber while also shielding the specimen from direct exposure to radiant heat.

# Flexibility

Series 651 chambers are ideal for research, reliability testing, quality control and production testing. Typical applications include body and engine mount tests, tire cord tests, vibration isolator tests and material studies of elastomers, plastics, polymer matrix composites and laminates.

Cart stand for use with Acumen or Landmark tabletop units

# **Engineered for Dependable Operation**

Every aspect of Series 651 Environmental Chambers was designed using decades of MTS experience developing test systems for numerous industries. These environmental chambers may include:

- » Circulating fan helps ensures small specimen temperature gradients
- Removable "U-plug" sections allowing » chambers to be moved into place after the specimen is mounted and instrumented
- » Doors that open to 180° or can be lifted away for convenient specimen access
- Multi-panel, tempered optical quality » glass windows are sealed to reduce

fogging and frosting. If required for non-contacting strain measurement solutions or video monitoring, the chambers can be provided with optional defrost elements

- Internal light to illuminate the test » area is supported by 651.05 & .06. 651.10 chambers have an external light mounted to the chamber window / door
- » Mobile carts to prevent interference between chambers and the load frame

# Generic Series 651 Schematic

Series 651 chambers support a wide range of tests, applications and test system configurations.

**Model 651.05F-01** works in a variety of general materials testing applications -151°C (-238°F) up to 350°C (662°F) with floor-standing models of the MTS Acumen test system.

**Model 651.05F-02** is ideal for general materials testing applications -151°C (-238°F) up to 350°C (662°F) with tabletop models of the MTS Acumen test system.

**Model 651.06E-03** handles general materials testing -129°C (-200°F) up to 315°C (600°F) with floor-standing MTS Landmark test systems.

**Model 651.10E-04** offers support for general materials testing -129°C (-200°F) up to 540°C (1000°F) with floor-standing MTS Landmark test systems.

**Model 651.06E-04** is designed to accommodate large specimens or specimens that require large grips within the chamber. Works -129°C (-200°F) up to 315°C (600°F) with floor-standing MTS Landmark test systems.

# CUSTOM CHAMBER DESIGN

MTS can design and build custom chambers for use with mechanical refrigeration, humidity control, salt spray and other applications as well as in special sizes to suit unique testing requirements, including integration with other test systems. Contact MTS for more details.

![](_page_4_Picture_9.jpeg)

![](_page_5_Figure_1.jpeg)

Series 651 chambers provide the sizes test teams need to perform accurate environmental testing on an array of specimens.
